

### Tiempo en el que se cargan el diccionario completo:

The screenshot shows an IDE with a Java file named `Spanish.txt` being processed. The code reads the file line by line, splits each line by spaces, and adds the resulting key-value pairs to a dictionary. The test results at the bottom indicate that the test passed in 302 ms.

```
10 File file = new File( pathname: "Spanish.txt");
11 Scanner input = new Scanner (file);
12 while(input.hasNextLine()){
13     String dato = input.nextLine();
14     String[] partes = dato.split( regex: "\\s+");
15     String llave = "";
16     String valor = "";
17     if(partes.length<=2){
18         llave = partes[0];
19         valor = partes[1];
20     }else{
21         llave = partes[0];
22         valor = partes[2];
23     }
24     almacen.add(llave,valor);
25 }
26
27
28
```

Tests passed 1 of 1 test - 302 ms
